

VAN DAALEN CONTINUO ORGAN

In December 2017, The Music Department at PRUMC acquired a Van Daalen Continuo Organ. A continuo organ is a usually one-manual pipe organ and is built to be more or less mobile. It was common in sacred and secular music between the 10th and the 18th centuries, in chapels and small churches, as a chamber organ and for the basso continuo in ensemble works. It is used regularly at Peachtree Road when an intimate organ sound is required for the music performed in concerts and services, such as Handel's Messiah in the Many Moods of Christmas Program and during Holy week. The Continuo Organ is better suited to produce this kind of sound than our Mander organ. Renovation and restoration provided by Robert I. Coulter Organbuilders.
